Jasper **Brumter**
Full Stack Web Developer

OBJECTIVES

Graduate of Le Wagon's full-stack web developer formation in Montreal, I am looking for a job opportunity starting in January 2019. Having always been passionate about software and digitalization, I am now using Ruby on Rails and React in order to make more profound web applications and work as a freelancer.

PROFESSIONAL EXPERIENCE

Sous-Chef, Web Developer | Warehouse Group
May 2016 – May 2018   (Montreal, Canada)

As part of the managing team of a restaurant, one learns a lot about working under pressure. This experience taught me interpersonal skills and the importance of teamwork.

- Sous-chef responsibilities include handling inventories and orders (over $25,000 per week)
- Bilingual and fast-paced work environment (over $8000 kitchen sales per night)

Trusted and good with numbers, I was selected to do the inventory, a slow and tedious process. I developed a JavaScript webpage to help this process and minimize mistakes.

- Now integrated in several locations of the chain

Data Analyst | LittleBigJob Inc.
January 2016 – May 2016   (Montreal, Canada)

Working in Big Data was very rewarding as I discovered the start-up environment, learned from my colleagues and fuelled my interest in programming with Python. As an intern, my responsibilities included

- Data Extraction from JSON files, using Python
- Data Analysis, using Python and Excel
- Data Visualization, using JavaScript and Python

Data Analyst | I2F Fiscal and Financial Engineering
June 2015 – July 2015 (Noumea, New-Caledonia)

This French company offers real estate investment programs, and needed tools to simulate expected returns for potential customers. Over my two months mission, I:

- Developed an Excel template to not only simulate but also compare several investments, hence helping customers choose the best option for them.
- Collaborated with La-Fabrik web agency during the development of I2F's new website, for decisions concerning design and content.
